Welcome to Networking: Effectiveness through Cooperation.

This program is truly an exemplification of the conference theme. It was developed through the collaborative efforts of three diverse membership organizations and the unique talents of many individuals.

We hope that you enjoy the meeting and avail yourself of the opportunity to network with colleagues.

Sincerely,

[Signature]

Salon E
THE ADIRONDACK PARK CENTENNIAL VIEWED FROM THE ARCHIVES OF THE ADIRONDACK RESEARCH CENTER. Maryde F. King, Chairperson, Adirondack Research Center

A display of the first New York State map showing the "blue line" along with one of the most current maps of the Adirondack Park from 1862 to 1992. Three periods characterize the Park history: the early period of lumbering, mining and farming; the middle period emphasizing the use of the park for fishing, hunting, hiking and all other outdoor forms of recreation and health; and the future, studied, talked about, written about, argued about, fought about, and even dreamed about, but still largely unknown.

Benchmarking is a process whereby library resources, operations, and efficiencies are compared with the best. By identifying where and how improvement can be implemented, benchmarking is an essential component of any Quality Improvement Program. Review results of a benchmarking exercise performed by eight corporate SCRLC libraries.

CD-ROM ACCESSIBILITY AT SUNY INSTITUTE OF TECHNOLOGY: THE NETWORK SOLUTION. Mary L. Strife, Public Services Coordinator, SUNY Institute of Technology, Utica/Rome.

CD-ROMs arrived at the SUNY Institute of Technology Library in 1988 with the purchase of Wilson's Applied Science and Technology. By the fall semester, Medline and Compact Disclosure were added. All were loaded on stand alone IBM PS/2 machines with IBM Proprinters and Philips CD-ROM drives. Over the next several years, disks were added and deleted until there were nine different disks sharing three stations. For many reasons, the decision was made in 1991 to set up a local area network (LAN) with six stations and twelve CD-ROM products. Unforeseen delays forced us to wait for the system setup until April 1992. The results were well worth the wait.

DIAL ACCESS TO THE REGIONAL CATALOG. Jeannette Smilhee, Assistant Director, Central New York Library Resources Council.

The Central New York Library Resources Council (CENTRO) regional catalog (MOHOC) contains 1.4 million titles from libraries in Madison, Clinton, Herkimer, and Onondaga counties. In 1992, a Regional Automation Grant allowed the SUNY Health Science Center to mount the catalog with CDLINK software and allow dial access. In the first few months, over 30 libraries requested user IDs to be able to dial into the MOHOC Catalog. The Council worked with SUNY HSC to develop a User Guide which would introduce a new user to the use of communications software for dial access and the basics of searching the Catalog.

LIBRARIANS IN NEW YORK STATE GOVERNMENT. Barbara S. Beverley, New York State Dept. of Economic Development.

Do you know these people? One of the best kept secrets of government is the existence of libraries and librarians in state agencies. Everyone knows about the State Library but few are aware that many agencies have their own libraries with collections and services tailored to the particular needs of their clientele - and staffed by some pretty special people. This session highlights a number of libraries in New York State agencies, courts, health facilities, and the legislature.

NURSING INFORMATION RESOURCES. Warren G. Hawkes, Library Director, New York State Nurses Association.

Professional nurses are the single largest group of health care practitioners with the current number being in excess of 2 million in the United States. However, for a variety of reasons, nurses are often underserved by the health sciences information community. This series of three posters presents information on organizations, services which promote access to and use of information for professional nurses. The organizations/services presented are: Interagency Council on Library Resources for Nursing, New York State Nurses Association, and the American Nurses Association Workplace Advocacy Information System.
OUTREACH PROGRAM FOR WESTERN NEW YORK, MIDDLE ATLANTIC REGION, NN/LM. Cynthia A. Bertucca, Head, IDS, and Tracy A. Notarius, Outreach Librarian, State University of New York at Buffalo.

The Health Sciences Library, State University of New York at Buffalo, has been awarded a subcontract in conjunction with the Middle Atlantic Region, National Network Libraries of Medicine, New York Academy of Medicine. The purpose of this project is to provide outreach services to unaffiliated, rural, and minority health professionals which in turn will promote awareness of access to biomedical information. NLM's services and products to be promoted will primarily be GRATUFE MED and LONESOME DOC. The geographic area to be serviced is within Region 1 and is comprised of Western New York, Rochester, and the South Central Districts of New York State.

This poster session documents the components of a research project to evaluate the impact of the hospital library on patient care in 76 hospital libraries in the metropolitan New York area. Contents include information from the original task force creation in August 1990, through survey tool development in 1990 and 1991, to data collection and tabulation in 1991 and 1992.

INFORMATION Rx: 13210. Wendy Skinner, Director, and Garry Forger, Computer Assisted Instruction Coordinator, Crouse Irving Memorial Hospital Library.

Hospital library services provide access to information to meet the needs of all hospital personnel. By addressing diverse information needs throughout the organization, library services affect patient care outcomes and contribute actively to the achievement of the hospital's mission.
